LISTING OF THE CLAIMS

Claims pending

• At time of the Action: Claims 1-10, 12-13, and 16-19.

• After this Response: Claims 1-10, 12-13, 16-19 and 21-24.

Canceled or Withdrawn claims: 11, 14-15, and 20.

Amended claims: Claims 1 and 19.

New claims: Claims 21-24.

1. (Currently Amended) An apparatus for running wire, the apparatus comprising:

a projectile launcher, comprising:

a housing including a biasing member attached to a piston; and a locking member for retaining the piston in a biased position and for triggering release of the piston,

a pull string,

a projectile adapted to connect to the pull string;

wherein the piston accelerates upon release and propels [[a]] the pull string attached to [[a]] the projectile toward a target, and[[.]]

wherein the projectile and the pull string are not connected to the projectile launcher upon release of the piston.

2. (**Original**) The apparatus of claim 1, wherein the pull string is attached to one or more wires.

LEE & HAYES, PLLC

1

- 3. The apparatus of claim 1, wherein the projectile comprises a deformable sack containing weighted filler material.
- The apparatus of claim 1, wherein the projectile further 4. (Original) comprises at least one fastener.
- 5. The apparatus of claim 4, wherein the pull string is (Original) attached to at least one fastener.
- The apparatus of claim 1, wherein the housing 6. (Original) comprises a tube.
- 7. (Original) The apparatus of claim 6, wherein the tube has an open proximal end and a closed distal end.
- 8. The apparatus of claim 1, wherein the biasing member (Original) comprises a coil spring.
- 9. (Original) The apparatus of claim 8, wherein the coil spring is attached to the housing.
- The apparatus of claim 1, wherein the piston includes a 10. (Original) notch for engaging the locking member.

11.	(Withdrawn)	The apparatus of claim 1,	wherein t	he piston	includes
a groove for	engaging the lo	cking member.			

- 12. (**Original**) The apparatus of claim 1, wherein the piston includes one or more guide pins for moving the piston.
- 13. (**Original**) The apparatus of claim 12, wherein the one or more guide pins slide within corresponding slots in the housing.
- 14. (Withdrawn) The apparatus of claim 1, wherein the piston includes a rod for moving the piston.
- 15. (Withdrawn) The apparatus of claim 14, wherein the rod includes a plunger handle extending from the housing.
- 16. (**Original**) The apparatus of claim 1, further comprising one or more rails shielding the locking member from accidental triggering.
- 17. (**Original**) The apparatus of claim 1, wherein the locking member comprises a latch.
- 18. (**Original**) The apparatus of claim 17, wherein the latch comprises a retaining member for engaging the piston.

19.	(Currently Amended)	An	apparatus	for	running	wire,	the
apparatus c	omprising:						

projectile launching means, comprising:

biasing means for accelerating a piston; and

locking means for retaining the piston in a biased position and for triggering release of the piston; and

a pull string;

a projectile attached to the pull string;

wherein release of the piston propels a-the pull string attached to [[a]] the projectile toward a target[[.]]; and

wherein the projectile and the pull string are not connected to any portion of the projectile launching means upon release of the piston.

- 20. (Withdrawn) A method for running wire, the method comprising: creating a path to a desired target; propelling a pull string attached to a projectile toward the desired target; using the pull string to draw wire to the desired target.
- 21. (New) The apparatus of claim 1, the projectile further comprising a locating beacon.
- 22 (New) The apparatus of claim 1, the projectile further comprising a luminescent surface.

1	23. (New) An apparatus, comprising:
2	a housing;
3	a piston, the piston at least partially enclosed within the housing;
4	a coil spring, the coil spring attached to the piston and at least partially
5	enclosed within the housing;
6	a locking device, comprising:
7	a lock; and
8	a trigger, the lock configured to hold the coil spring in a
9	compressed position and the trigger configured to release the coil spring from the
0	compressed position when the trigger is activated; and
ı	a wire;
2	a projectile, comprising:
3	a deformable sack;
-1	

a wire attaching mechanism configured to attach the wire to the

projectile; and

a locating beacon;

weighted material;

wherein the projectile is configured to sit within the housing and be propelled upon activation of the trigger, and wherein the projectile and the wire are entirely disconnected from the apparatus upon activation of the trigger and exit from the housing.

24. (New) The apparatus of claim 23, wherein the locating beacon comprises one of: a glowing stick, an audible beacon, a strobing light, or a GPS device.
